

# Welcome Letter

## 5th China Telematics and Connected Vehicles Summit 2018

Dear Delegates,

Welcome to the 5th China Telematics and Connected Vehicles Summit 2018, organized by Duxes from May 23-24, 2018 in Beijing, China.

The Chinese auto market is currently the largest in the world, and contains an emergent telematics sector. Consumer demand in China for vehicles with intelligent functions such as ADAS, telematics, and infotainment, is substantial. Globally, the telematics market is expected to exceed \$140 billion by 2022, from an estimated \$26 billion in 2015, a CAGR of 28.5% over the course of 2016-2022, according to a recent report. Due to the enormous potential in this field, Auto OEMs have been joined by leading technology companies in the race to develop intelligent, autonomous vehicles of the future.

In accordance with its support for innovation in the automotive industry, Duxes will host the 5th China Telematics and Connected Vehicles Summit 2018, which will take place on May 23-24 in Beijing. The event will bring together industry leaders, experts, and policymakers to share experiences and opinions on developments related to telematics and connected vehicles, offering a unique platform for participants to familiarize themselves with the current business landscape for telematics in China. The summit will cover a wide range of topics including market conditions for telematics in China and around the world, ADAS technology, infotainment, applications for big data, information security, sensor technology, and uses of telematics for fleet management and commercial vehicles.

The Connected Vehicle Trade Association strives to promote and educate the industry about the value of Connected Vehicle services, as well as the adoption of feasible technical and organizational approaches. We are delighted to support this prestigious summit, which we are certain will impart much knowledge on all who attend.

Yours sincerely,

Scott J. McCormick, President  
Connected Vehicle Trade Association
